

Historical ciphers: ciphertext-only solutions

cyphersolver project (Daniel Bourdeau, with George Lasry) · 22 ciphertext-only first breaks and 3 further Cipherbrain challenges · list of 25 September 2026 · <https://dbourdeau.github.io/cyphersolver/>

Key recovered from ciphertext only

First breaks: the key was rebuilt from the ciphertext alone, with no plaintext and no existing key. Three items had also been solved earlier by George Lasry but never published; the LLMs solved them independently, and his unpublished solution is noted.

1. Sienese envoys and others to the government of Siena before 1429 to 1547

Keys recovered from the ciphertext alone for three letters (nos. 25, 18, 14) and from an alphabet fragment for a fourth; none of the 43 keys filed with the letters fits. No. 25 reads 96.2%, no. 18 (Latin treaty articles with the Emperor) 87.1%. Several other letters in the file remain open.

Method	ciphertext-only break · partial
Primary source	Archivio di Stato di Siena, Concistoro 2308, fasc. 2 "Lettere in cifra"
Secondary source	DECODE R4790-R4814 (no status); the archive's 1952 inventory calls the letters 'solo parzialmente decifrate'
Write-up	https://dbourdeau.github.io/cyphersolver/siena1421.html

2. Matheo de Segura to the Constable of Castile Madrid, 8 Aug 1596

Two short passages in a homophonic cipher; the key was rebuilt by annealing and resegmenting the image. 119 of 125 cipher tokens read (95.2%). The passages concern predictions of the world ending or the king dying by September.

Method	ciphertext-only break · complete
Primary source	BnF, espagnol 336 no. 99, ff. 196r-198r · Gallica
Secondary source	Tomokiyo, cryptiana (spanish3.htm, unsolved.htm): the last es. 336 item listed as undeciphered · spanish3.htm · unsolved.htm
Write-up	https://dbourdeau.github.io/cyphersolver/segura1596.html

3. Giovan Gioacchino da Passano (attributed), London, to Francis I 15 Mar 1530 (copy heading)

An account of Wolsey's wealth: cash, credits, revenues, jewels and plate, Winchester, St Albans and York. A dotted re-transcription made the break possible. 386 of 402 signs read coherently (96.0%).

Method	ciphertext-only break · complete
Primary source	BnF, Clairambault 331, ff. 156-157 · Gallica
Secondary source	Tomokiyo, cryptiana (francis.htm), listed as undeciphered · francis.htm
Write-up	https://dbourdeau.github.io/cyphersolver/joachim1530.html

4. Mémoire en chiffre to the connétable de Montmorency 12 Dec 1560

Ten pages in a cursive pseudo-script: a homophonic substitution with two-stroke units and four word codes, broken from the images alone. It reports on the Protestant rising in the Agenais a week after François II's death. 98.9% of 1,715 cipher words read.

Method	ciphertext-only break · complete
Primary source	BnF, français 3157 no. 67, ff. 152r-156v · Gallica · BnF catalogue
Secondary source	BnF catalogue (Gallica harvest); no DECODE record
Independent solution	Solved independently by the LLMs , from the ciphertext alone and without knowledge of any earlier solution. In private communications, Lasry wrote that he had also solved it in 2023 (improved in February 2026), but his solution has not been published.
Write-up	https://dbourdeau.github.io/cyphersolver/memoire1560.html

5. "L'Estat du Roy de Navarre et de son party en France" after 1580

A French memoir on Navarre's party in a homophonic alphabet of about 50 graphic signs. The letter m is written as a group of dots, which earlier passes took for punctuation. 95.1% read.

Method ciphertext-only break · complete
Primary source British Library, Harley MS 1582, ff. 263-264
Secondary source DECODE [R8505](#) (Non-decrypte, "unknown sender")
Write-up <https://dbourdeau.github.io/cyphersolver/harley1582r8505.html>

6. Ferenc Wesselényi, Palatine of Hungary, to Leopold I c. 1663-64

A reversed-alphabet cipher with vowel homophones in a Latin draft, broken by annealing and then corrected by hand. A general is to take His Majesty's garrison by force if need be. 98.8% of cipher tokens read; two codes are open.

Method ciphertext-only break · complete
Primary source MNL OL E 199 (Wesselényi family archive), 8. pallium 1. 01
Secondary source DECODE [R674](#) (non-decrypte)
Write-up <https://dbourdeau.github.io/cyphersolver/wesselenyi1664.html>

7. Sir Simonds D'Ewes, cipher log of his son's convulsion fits 3 Apr 1635 - Jan 1636

D'Ewes's private alphabet over Latin, rebuilt from cribs (convulsio, plena luna); the weekdays and moon phases check out against his Autobiography. 96.5% of 287 words read.

Method ciphertext-only break · complete
Primary source British Library, Harley MS 286, f. 61 · [BL catalogue](#)
Secondary source DECODE [R7759](#) ("unknown sender to unknown recipient, 1635")
Write-up <https://dbourdeau.github.io/cyphersolver/harley286.html>

8. Unknown writer to Hesse-Kassel undated (volume 1635-52)

A digit-and-sign letter substitution. None of the volume's ~120 key sheets fits; the key was annealed on German of the period and confirmed by the contemporary gloss on lines 1-4. About 97% read.

Method ciphertext-only break · complete
Primary source Hessisches Staatsarchiv Marburg, HStAM 4 d Nr. 1218, no. 49 · [Arcinsys](#)
Secondary source DECODE [R4500](#) (partially decrypte)
Write-up <https://dbourdeau.github.io/cyphersolver/marburg1635.html>

9. Ferdinand of Bavaria, Elector of Cologne, to Duke Maximilian I of Bavaria Bonn, 22 Dec 1619

Ten pages in a homophonic substitution on two-digit figures with a nomenclator, broken by annealing 2,482 letters; the key reads the sibling R9425 unchanged. The letter covers quartering and troops six weeks after Frederick V's coronation. 95.8% read.

Method ciphertext-only break · complete
Primary source Bayerisches Hauptstaatsarchiv, Kurbayern Äußeres Archiv 4591, ff. 281-286
Secondary source DECODE [R9426](#) (non-decrypte, no author or recipient)
Write-up <https://dbourdeau.github.io/cyphersolver/ferdinand1619.html>

10. Swatow telegram to Sun Yat-sen 3 Apr 1916

Standard Chinese telegraph code passed through a systematic code condenser, recovered by brute force. 41 of about 44 characters read.

Method ciphertext-only break · complete
Primary source JACAR (Japan Center for Asian Historical Records) B03050738800 · [JACAR](#)
Secondary source Tomokiyo, cryptiana list and blog (12 Dec 2021), unsolved since 2021 · [chinesecrypto_e.htm](#) · [blog_12 Dec 2021](#)
Write-up <https://dbourdeau.github.io/cyphersolver/sunyatsen.html>

11. Sun Yat-sen's intercepted telegrams Mar 1916 - Mar 1917

About 60 condenser telegrams read under seven keys of the Swatow family, plus the Hankow +111 digit code, including Chen Qimei's assassination as reported to Tokyo. Sun's six-vowel 文密 code is still open.

Method	ciphertext-only break · complete
Primary source	JACAR, 特定人／発受郵便物取調 (Ministry of Communications intercepts) · JACAR (first file)
Secondary source	Follow-on from the Swatow telegram (cryptiana) · chinesecrypto_e.htm
Write-up	https://dbourdeau.github.io/cyphersolver/sunintercepts.html

12. Warsaw letter to the Bishop of Olmütz (?) 24 Dec 1627

A homophonic substitution whose alphabet is in plain order, with syllables, nulls and thirteen word codes, recovered by annealing. The writer presses for a canonry of Olmütz for a son of the Queen of Poland. Read in full; the word codes are glossed from context.

Method	ciphertext-only break · complete
Primary source	ÖStA HHStA, Staatskanzlei Interiora, Chiffrenschlüssel Kt. 14 Fasc. 20 f. 176

Write-up	https://dbourdeau.github.io/cyphersolver/warsaw.html

13. Henry of Navarre to Ségur 1585-86

Three figure-cipher letters to the envoy raising a German army. The key, an alphabetical syllabary, was rebuilt by a structured annealer and checked on matched controls. The letters cover Duke Casimir, Clervant's reiters and the road through the Vivarais.

Method	ciphertext-only break · complete
Primary source	BnF, 500 de Colbert 401, ff. 233, 239, 288v · Gallica
Secondary source	Tomokiyo, cryptiana unsolved list (as letters of Henry III) · unsolved.htm · henryiii.htm
Independent solution	Solved independently by the LLMs , from the ciphertext alone and without knowledge of any earlier solution. In private communications, Lasry wrote that he had also solved it in 2024, but his solution has not been published.
Write-up	https://dbourdeau.github.io/cyphersolver/segur.html

14. Cardinal Soglia to nuncio Viale Prelà at Innsbruck Rome, 15 June 1848

A 64-cell two-digit table with homophones and syllables, 5 as word separator, and an alphabetical one-part code. It is a counter-order: stay with the Emperor and suspend the request for passports. Ten code words read from context; 11 code groups open.

Method	ciphertext-only break · complete
Primary source	L'Italia del Popolo no. 40 (Milan, 30 June 1848), Roman broadsheet reprint

Cipherbrain	also a Cipherbrain challenge
Write-up	https://dbourdeau.github.io/cyphersolver/soglia1848.html

15. Gottfried van Swieten to Count Cobenzl Bonn, 1757-59

The 1759 table (groups 100-442) was rebuilt ciphertext-only by monotone annealing against French, then corrected by hand. The despatches cover the Gueldre convention and Soubise's army. 96% of 553 groups read.

Method	ciphertext-only break · complete
Primary source	Archives générales du Royaume, Brussels, Secrétairerie d'État et de Guerre 1236
Secondary source	DECODE R955-R957 (non-decrypting)
Write-up	https://dbourdeau.github.io/cyphersolver/swieten1757.html

16. Johann Heinrich Kauderbach (The Hague) to Brühl / Friedrich August II 1754-56

Unseparated figures in which 5 and 8 are nulls; one key serves all ten despatches. It was found by one-to-one annealing onto the vocabulary of his 1761 key. All ten despatches read at 65-97%, covering the Dutch augmentation debate and the Treaty of Versailles.

Method ciphertext-only break · complete

18. Four cipher letters to Gianfrancesco Gonzaga, lord of Mantua 1428-1430

Two keys rebuilt ciphertext-only: Rome, 9 Aug 1428 (96.6%) and Cattanei, Feb 1430 (96.7%). A third letter was re-deciphered from its interlinear gloss. Pandolfo Malatesta's own runs remain open. 91.5% of all signs read.

Method ciphertext-only break · partial
Primary source Archivio di Stato di Mantova, Archivio Gonzaga
Secondary source DECODE [R1854](#) (partially decrypted; catalogued as one letter)
Write-up <https://dbourdeau.github.io/cyphersolver/r1854.html>

19. Guido Rangone (Venice) to Anne de Montmorency 24 Dec 1529 and 10 Jan 1530

A homophonic substitution of about 50 signs for Italian, broken by annealing. Both passages concern Cesare Fregoso. 87.9% of signs read; four short runs are too short to resolve.

Method ciphertext-only break · partial
Primary source BnF, français 3070 f. 81 no. 40 and français 3082 f. 42 no. 19 · [Gallica fr. 3082](#) · [Gallica Clair. 331 copy](#)

Write-up <https://dbourdeau.github.io/cyphersolver/rangone1530.html>

20. Thomas Edmondes (at Henri IV's court) to Lord Treasurer Burghley Jan 1592 - Jul 1594

Six letters from the King's camp with lines in invented signs: a simple substitution of English with homophones and person signs, broken from the clear context. Everything reads except four lines on f. 59.

Method ciphertext-only break · partial
Primary source British Library, Stowe MS 166, ff. 50-61, 109-112
Secondary source DECODE [R7770-R7775](#) ("Lord Threr? to unknown recipient")
Write-up <https://dbourdeau.github.io/cyphersolver/stowe166.html>

21. Claude de La Guiche, bishop of Mirepoix (Rome), to Montmorency 22 Nov 1551

A 406-sign passage in 22 invented signs, broken by permutation annealing. It covers the Count of Santa Fiora, 'mal satisfait' and ready to serve the king on conditions. Seure's Lisbon letters in the same file are left open.

Method ciphertext-only break · partial
Primary source BnF, français 3138 no. 22, f. 60v · [Gallica](#)

Write-up <https://dbourdeau.github.io/cyphersolver/guiche1551.html>

22. An Orange prince to an officer of the Dutch émigré troops c. 1795

Vertical digit pairs from a 6x6 square, recovered by quadgram annealing on the Dutch postscript; the square then read the French page unchanged. The letter concerns General Dundas, pay and embarkation. 94% of cipher tokens read; about thirty word signs open.

Method	ciphertext-only break · partial
Primary source	Koninklijk Huisarchief, The Hague, Prins Willem V inv. 339
Secondary source	DECODE R1892 (non-decrypte)
Independent solution	Solved independently by the LLMs , from the ciphertext alone and without knowledge of any earlier solution. In private communications, Lasry wrote that he had also solved it in 2021, but his solution has not been published.
Write-up	https://dbourdeau.github.io/cyphersolver/r1892.html

Other Cipherbrain challenges (any method)

Challenges posted on Klaus Schmeh's Cipherbrain that this project read by other routes. The Soglia dispatch above is also a Cipherbrain challenge.

23. Johan Banér to Torsten Stålhandske (intercepted copy) Hof, 29 Dec 1640

A homophonic two-digit alphabet with 14 code words; none of the Swedish keys on DECODE fits. The key was rebuilt from context cribs (durch, und): the letter orders a march toward the Upper Palatinate. 89.8% of tokens read; the code words are open.

Method	key from adjacent plaintext · partial
Primary source	Archivio della Pontificia Università Gregoriana, APUG 568 f. 239 (Kircher correspondence)
Secondary source	Cipherbrain challenge (Klaus Schmeh, 2 June 2019) · Cipherbrain, 2 June 2019
Write-up	https://dbourdeau.github.io/cyphersolver/baner1640.html

24. Pseudo-Arndt, "Das zweyte Silentium Dei" Glücksbrunn, 1798

Read with the key drawn in the book itself (p. 83), so no key was recovered. All 31 cipher passages (1,545 signs) were transcribed and read. Page 24 had already been read by Lasry and Kopal (Cipherbrain 2022); five short passages are read here for the first time and earlier readings corrected.
